

<b>Title of the measure:</b>	CZ31: Support for the installation of cogeneration units
------------------------------	--

### ***General description***

The aim of the measure is to provide investment support to micro-cogeneration and to small and medium cogeneration units. The measure will contribute, among other things, to an increase in utilisation of gas connections, the development of a decentralised energy sector and, in some cases, improvements in air quality.

This measure is applicable throughout the Czech Republic. The expected service life is 20 years.

### ***Impact evaluation***

It is possible to monitor the benefits by monitoring the energy-saving projects supported by the programmes. It will only be possible to determine the amount of energy saved after the implemented projects have been analysed.

Expected energy savings [TJ]:

	<b>2017 – 2020</b>
Households	200
Services	400

### ***Interaction of measures***

None.
