

<i>Title of the measure:</i>	Energy Conservation Standards for New Dwellings (Revised Building Regulations) 2002
-------------------------------------	---

General description

In 2002 Part L of the building regulations governing the conservation of fuel and energy in dwellings was amended. The new regulation came into effect in January 2003 and superseded the Part L of the 1997 building regulations. The 2002 regulations introduced significant improvements to the maximum permitted elemental U-values for various fabric elements including roofs, walls, floors, doors and windows and also to the maximum average U-value in relation to building volume and total area of heat loss elements.

Historical data

The 2002 Revision to Part L of the Building Regulations supersedes Part L of the 1997 Building Regulations
