

<b>Title of the measure:</b>	CZ13: State programme to promote energy savings (EFEKT 2)
------------------------------	---

### **General description**

The EFEKT 2 Programme is under the auspices of the Ministry of Industry and Trade and focuses on investment support for public lighting and non-investment support for developing awareness of energy savings among the general public and the professional community.

The aim of the measure is to increase energy savings by means of investment projects focusing on:

- Measures to reduce the energy intensity of public street lighting;
- Renovation of heating systems and sources in a building;
- Energy-saving measures in buildings using the EPC method
- Specific and pilot projects

An important part of the programme is non-investment support for soft measures in the field of energy consultancy and education with a focus on raising awareness among the general public and the professional community in all sectors about the economical use of energy and the possibilities for energy saving. Supported activities include:

- Energy Consulting and Information Centres (ECIS);
- Projects aimed at the active dissemination of information and education in the field of energy saving;
- Publications, background documents and tools for the dissemination of information and education in the areas of energy saving, including support for international cooperation and activities in accordance with Article 17 and Article 25 of the Energy Efficiency Directive;
- Introduction of an energy management system;
- Assessment of the suitability of structures for energy-saving projects using the EPC method.

This measure is applicable throughout the Czech Republic.

The service life of information dissemination is difficult to estimate – it encompasses events with a longer life, such as the purchasing appliances with higher efficiency, and the implementation of certain physical measures, but also transient effects, such as changes in the behaviour of energy consumers.

### **Impact evaluation**

Benefits are calculated indirectly, based on the resources spent and typical unit investments of energy savings known from previous programme calls.

Expected energy savings [TJ]:

	<b>2007 – 2010</b>
awareness and information measures	200
investment measures	200

Only investment measures belong to the tertiary sector, awareness and information measures belong among crosscutting measures.

### **Interaction of measures**

None.
